Abstract. In the context of globalisation, journalism and communication education is faced with the challenges of technological advancement, cultural diversity, ethics and education systems, which require journalism education to continuously adapt and innovate in order to train journalism practitioners who are able to work effectively in a complex and volatile global environment, and at the same time globalisation has brought unprecedented opportunities for journalism and communication education, including international cooperation, technological innovation, At the same time, globalisation has also brought unprecedented opportunities for journalism and communication education, including international cooperation, technological innovation, cultural exchange and the enhancement of ethical standards. By seizing these opportunities, the quality and impact of journalism and communication education can be improved, and students can be provided with broader perspectives and richer learning resources.

Keywords: globalisation; journalism and communication education; technological advances

1. Introduction

As the process of globalisation accelerates, the field of journalism and communication has undergone radical changes, which have put forward new requirements and challenges for journalism and communication education. Educators need to reconsider how to cultivate journalism professionals to meet the needs of the era of globalisation, which not only brings opportunities for technological advancement and cultural exchanges, but also poses the challenges of cultural diversity and ethics, and in the face of these challenges and opportunities, journalism and communication education must adopt innovative educational strategies and methods in order to train journalism practitioners with a global perspective, technical proficiency and a high degree of ethical outlook.

2. Challenges for journalism and communication education in the context of globalisation

2.1. Challenges of cultural diversity

In the context of globalisation, cultural diversity has brought profound challenges to journalism and communication education, and this challenge is mainly reflected in how to cultivate students' ability to communicate and report effectively across cultures, and how to enable them to understand and respect the journalistic values and ethical standards of different cultures. With the acceleration of the global flow of information, it has become more and more necessary for journalists to have a global vision and to be able to gather and report news effectively in different cultures. However, the differences in values, beliefs and customs that exist between different cultures make cross-cultural journalism complex and sensitive. For example, a news report may be considered objective and fair in one culture, while it may cause misunderstanding or conflict in another. In addition, journalism and communication education needs to face the problem of how to teach students to identify and deal with In addition, journalism and communication education needs to face the issue of how to teach

students to recognise and deal with cultural biases and stereotypes, which is essential for promoting cross-cultural understanding and respect.^[1]

Therefore, journalism and communication education needs to adopt innovative teaching strategies and methods to meet the challenges posed by cultural diversity. Curriculum design needs to pay more attention to cross-cultural communication and training in international news reporting, and through the introduction of courses in comparative journalism, students can learn about the news production processes, reporting styles and the cultural factors behind them in different countries and regions. Meanwhile, educators should encourage students to take part in international exchange programmes to enhance their cross-cultural communication skills and global vision through field experience and learning.

2.2. Ethical challenges

In the context of globalisation, the ethical and moral challenges faced by journalism and communication education have become more complex and diverse, which not only involve how to maintain the truthfulness, impartiality and responsibility of the news in a rapidly changing media environment, but also how to deal with sensitive issues in reporting in a cross-cultural context, how to protect the source of information and personal privacy, as well as how to avoid prejudice and discrimination, and how to avoid discrimination in a cross-cultural context. With the development of digital technology, the diversification of news dissemination channels and the rise of social media, the speed of information dissemination is extremely fast, but at the same time, it also increases the risk of dissemination of false news, misleading information and harmful content, which requires journalists not only to have high professional skills, but also to have a strong ethical and moral concept, and be able to make correct judgements and choices when facing a large amount of information. In the face of these ethical and moral challenges, journalism and communication education must strengthen ethical education and moral development to ensure that students are able to follow high ethical standards throughout their careers. Educational programmes need to explore in depth the ethical issues of journalism in the digital age, including how to identify and prevent the dissemination of fake news, how to protect the privacy of sources of information and of interviewees, and how to be fair to all groups of people in reporting, and, secondly, to Through teaching methods such as case studies, role-playing and simulated reporting, students can learn how to deal with ethical conflicts and moral dilemmas in practice, and develop their critical thinking and ethical judgement. At the same time, students should be encouraged to take part in international exchanges and internships in multicultural environments, so as to enhance their understanding of and respect for ethical standards of different cultures, and to lay a solid ethical foundation for their future journalistic reporting and This will lay a solid ethical foundation for their future journalism and communication in the global arena.

2.3. Challenges of the education system

The challenges facing the education system of journalism and communication education in the context of globalisation are firstly reflected in how to build an education system that can adapt to the needs of the rapidly changing journalism industry and at the same time cultivate journalistic talents with global vision and intercultural communication skills. The current education system of journalism is often rooted in the domestic education traditions and practices, which to a certain extent restricts the integration and application of international journalism practices and global vision. With the deepening development of globalisation, journalism communication not only crosses national boundaries, but also involves complex international political, economic and cultural exchanges, which requires journalism education to cross the boundaries of a single discipline and integrate knowledge in multiple fields, such as international relations, cultural studies, and technological applications, etc. However, the development of such interdisciplinary integration and innovative teaching modes in the existing education system is still facing major challenges, including Rigidity of the curriculum, insufficient teaching resources, and a lack of interdisciplinary backgrounds among

teachers. In addition, the education system needs to address the issue of how to use modern technology to improve the quality and efficiency of education. The development of digital technology has provided journalism and communication education with new teaching tools and platforms, such as online courses and virtual reality (VR) news production experiences, which can greatly expand students' learning resources and horizons, and improve the interactivity and practicability of teaching; however, how to effectively integrate these technologies into the traditional education system and ensure that all students have equitable access to and utilise these resources while maintaining the quality and depth of education has become another important challenge that educators need to face^[2].

3. Opportunities for journalism and communication education in the context of globalisation

3.1. Opportunities for international cooperation

Under the background of globalisation, international cooperation has brought unprecedented opportunities for journalism and communication education, which is not only reflected in the sharing of educational resources, but also includes academic research, student exchange programmes and cooperation with international news agencies, etc. Through international cooperation, educational institutions are able to introduce advanced educational concepts and teaching methods from all over the world, and provide students with a richer and more diversified learning experience, such as Through international cooperation, educational institutions can introduce advanced educational concepts and teaching methods from all over the world, providing students with a richer and more diversified learning experience, for example, students can directly come into contact with journalism practices in different cultures through participating in international exchange programmes, thus broadening their horizons and enhancing their ability of cross-cultural communication and understanding, while at the same time, international cooperation also promotes academic research and knowledge innovation in the field of journalism education. Through joint research programmes and academic exchanges, educators and scholars can share research findings, discuss global challenges and opportunities in the field of journalism and communication, and contribute to the accumulation and dissemination of knowledge.^[3]

In addition, cooperation with international news organisations provides students with opportunities for practical work experience, helping them to better understand the standards and processes of international journalism and to develop the ability to work in a globalised context. Such cooperation is not limited to traditional internships, but may also include opportunities for joint seminars, workshops, and participation in international journalism projects, thus enabling students to be exposed to the news while still in study (c) To develop the capacity to work in a globalised context.

3.2. Opportunities for technological innovation

Technological innovation has brought unprecedented opportunities for journalism and communication education, especially in improving the quality of teaching, expanding the means and forms of news reporting and cultivating new types of journalism talents. With the development of artificial intelligence, big data analysis, virtual reality (VR) and augmented reality (AR) and other technologies, education and practice in the field of journalism and communication are experiencing fundamental changes, which not only provide new teaching tools and platforms for journalism education, making teaching more interactive and practical, but also expanding the possibilities of news reporting, providing students with opportunities to learn and practice these new technologies. These technologies not only provide new teaching tools and platforms that make teaching more interactive and practical, but also expand the possibilities of journalism and provide students with the opportunity to learn and practice these new technologies. For example, through the use of VR technology, students can carry out simulation training on news interviewing and reporting in a virtual

environment, and this immersive learning experience can greatly improve their professional skills and innovation ability.

In addition, technological innovation has opened up new research fields and career paths for journalism and communication education. With the rise of data news and algorithmic journalism, there is a growing demand for journalism professionals who can handle large amounts of data and extract news value from it, which requires journalism and communication education to not only teach traditional newsgathering and editing skills, but also to include the cultivation of skills such as data analytics, programming, and digital storytelling, technological innovation not only provide new content and methods for journalism education, but also open up pathways for graduates to enter emerging areas of the journalism industry that include, but are not limited to, data journalism, mobile journalism, and social media strategies.

3.3. Opportunities for cultural exchange

Cultural exchanges provide rich opportunities for journalism and communication education in the context of globalisation, especially in promoting students' cross-cultural understanding, enhancing their global perspectives, and developing their international journalism skills. Through exchanges and cooperation with scholars, students and journalism practitioners from different cultures, journalism and communication education is able to broaden students' horizons and enable them to gain a deeper understanding of the complexities of different cultures and societies. Such cross-cultural exchange opportunities are not only limited to classroom learning, but also include international academic conferences, workshops, overseas internships and student exchange programmes, which are valuable opportunities for students to learn how to communicate and report effectively in different cultural contexts. In addition, cultural exchanges provide a unique opportunity for journalism and communication education to develop new pedagogical content and methodologies through cross-cultural collaborative projects. For example, international collaborative journalism projects not only promote cultural exchanges among students, but also motivate them to work together in exploring and resolving global news issues, such as climate change, migration, and international conflicts, etc. These projects not only enhance students' sense of global responsibility and ethical awareness, but also develop their teamwork and cross-cultural communication skills^[4].

3.4. Promotion of ethical standards

The enhancement of ethical standards faced by journalism and communication education in the context of globalisation has brought about far-reaching impacts on the journalism profession, especially in terms of strengthening the quality of news, enhancing public trust and promoting social responsibility. With the development of information technology and the accelerated flow of information around the globe, it has become even more necessary for journalism practitioners to comply with high ethical standards in order to ensure the accuracy, fairness and responsibility of their reporting, and globalisation has made news reporting to cross national boundaries and involve different cultures and values, which requires journalism and communication education to strengthen ethical education for students, educating them to understand and respect ethical standards in different cultures and how to balance the needs and expectations of different stakeholders in reporting. By strengthening ethical education, journalism and communication colleges can produce journalism practitioners with a high degree of ethical awareness, who are capable of responsible decision-making in the face of a rapidly changing news environment and complex global issues^[5].

4. Conclusion

Under the background of globalisation, journalism and communication education faces many challenges and opportunities. Technological progress, cultural diversity, ethical and moral challenges, and the adaptability of the education system require educators and students to innovate and adapt,

while international cooperation, technological innovation, cultural exchanges, and the enhancement of ethical standards have opened up new paths for journalism and communication education, and by actively responding to the challenges and By actively addressing the challenges and seizing the opportunities, journalism and communication education can cultivate journalists with global vision, technical proficiency, strong ethical awareness and cross-cultural communication skills, thus contributing to journalism and communication in the era of globalisation.
