The Impact of Cross-Border Interconnectivity on the International Relations Landscape and Response Strategies

Chenyang Li
Faculty of Social Sciences and Law, University of Bristol, Bristol, UK

Abstract. With the continuous acceleration of globalization and rapid technological development, cross-border interconnectivity has become an important force shaping the current international relations landscape. This work delves into the influence of cross-border interconnectivity on the construction of new international relations and analyzes in detail its practices and developments in China's relations with neighboring countries. The findings reveal that cross-border interconnectivity not only promotes the strengthening of economic, political, and cultural ties among countries but also drives the diversified and inclusive development of new international relations. However, it is also necessary to confront the numerous challenges posed by cross-border interconnectivity, such as constraints from major powers and cross-border security risks. In order to address these challenges, this work proposes a series of recommendations. First, strengthen political dialogue between countries and enhance trust in China among neighboring countries through open and transparent cooperation mechanisms. Moreover, deepen regional security cooperation, jointly address cross-border security risks, and maintain regional peace and stability. Additionally, make efforts to enhance the governance capacity of neighboring countries to better adapt to the cooperation needs of cross-border interconnectivity. These recommendations not only provide practical guidance for addressing the complexity brought by cross-border interconnectivity but also substantially contribute to promoting global cooperative relations. This work provides an important contribution to the academic community by comprehensively analyzing the multifaceted impact of cross-border interconnectivity on international relations. Simultaneously, this work offers valuable insights for decision-makers and scholars by delving into the practical experiences and challenges faced by China in its interactions with neighboring countries.

Keywords: International relations construction; Cross-border interconnectivity; Challenges and response strategies; New international relations; Neighboring countries.

1. Introduction

With the continuous advancement of globalization and the rapid development of technology, as an emerging trend, cross-border interconnectivity is profoundly shaping the current world's international relations landscape. Its impact extends far beyond the economic realm and permeates various levels of politics, culture, and society. In such an increasingly interconnected era, it is crucial to recognize the significant influence of this global interaction and the profound changes it brings to the construction and practice of international relations. This work aims to explore the concept, characteristics, and continuous evolution of cross-border interconnectivity on the contemporary international stage and analyze the importance of this trend in international relations and the various impacts and challenges it presents in the international community [1].

The advent of the networked, digitized, and information-driven era brought about by cross-border interconnectivity has profoundly altered the ways countries connect and communicate [2]. This transformation provides unprecedented opportunities for international cooperation and also triggers a series of new issues and challenges. In this context, examining how cross-border interconnectivity reshapes the international relations landscape, promotes international cooperation and development, and addresses challenges in diversity, security, and governance brought about by this interconnectedness is necessary.
2. Inherent Logic between Cross-Border Interconnectivity and the New International Relations

2.1 Analysis of the Connotation of New International Relations

The concept of new international relations is an important ideology proposed by the Party Central Committee with Comrade Xi Jinping at its core. It emphasizes the coordinated handling of two major tasks, the overall planning of two major aspects, and alignment with the global development trend. Figure 1 represents the timeline of the development of new international relations.

The concept of jointly promoting the establishment of a "new type of international relations" by all countries

Making "New International Relations" a New Era for China

Guiding Principles of Diplomatic Work

Advocate for countries to establish the concept of peace, development, prosperity, fairness and justice

The 19th National Congress

Clarified the three major connotations of the new type of international relations

Mutual respect

Fairness and justice

Win win cooperation

Figure. 1 The timeline of the development of new international relations

The 19th National Congress of the Communist Party of China (CPC) elucidated the three key principles of the "mutual respect, fairness and justice, and win-win cooperation" in explaining the concept of new international relations to the international community. It continues the principles of the Charter of the United Nations and engages in profound theoretical innovation, surpassing the scope of traditional international relations theories. This is not just a theoretical deduction but a comprehensive summary of the wisdom and practices accumulated by China in handling international affairs and promoting global peace and development. This significant theoretical innovation signifies China's unique contribution to international relations, providing the world with a fresh perspective and model. The concept of new international relations, founded on the promotion of mutual respect, emphasizes the core principles of fairness and justice while highlighting the essence of cooperation and mutual benefit. This provides a more positive and constructive path for interactions between nations, effectively promoting progress in the global governance system. This concept's introduction is conducive to building a more equal and inclusive international order and sets a new example for mutual cooperation among nations. The concept articulated in the 19th National Congress report is not only characteristic of China but also possesses universal values, becoming a Chinese solution to steer international relations towards a more just, harmonious, and stable direction [3]. This concept's influence extends beyond China's international strategic scope, profoundly impacting the evolution of future world orders and the development of international relations. By actively participating in global affairs and advocating an international interaction based on equality and mutual benefit, China has established an image of responsible and pragmatic cooperation for the international community. This is expected to have far-reaching and positive impacts on aspects such as cooperation and competition, peace, and development on the international stage.

2.2 The Innovative Practice of Cross-Border Interconnectivity in Advancing International Relations

The relationship between China and its neighboring countries demonstrates innovation in the practice of cross-border interconnectivity, primarily reflected in its transcendence of traditional international relations. Power politics, state-centrism, and hegemony characterize traditional international relations. Power politics advocates viewing interstate relations from the perspective of national interests, emphasizing control of power, and may lead to competition or conflict between nations. State-centrism tends to perceive relations with neighboring countries with a single country...
at the center, ignoring the initiative of other international relationship subjects. Additionally, hegemony emphasizes the competitiveness and exclusivity of state relations [4].

In the practice of cross-border interconnectivity, the innovation in China's relations with neighboring countries is manifested in the transcendence of these traditional notions. First, China emphasizes the concept of win-win cooperation, replacing the zero-sum game mentality of power politics. This new concept focuses on seeking common interests on the international stage, promoting mutual prosperity, and avoiding potential competition and conflicts seen in traditional relationships. Besides, China advocates multilateralism, breaking the mindset of state-centrism and emphasizing mechanisms that allow equal participation and joint decision-making by all countries, thus enhancing the efficiency and sustainability of international cooperation. Finally, China emphasizes openness and inclusiveness, abandoning the zero-sum thinking of hegemony, striving to construct mutually respectful international relations, and providing more space for the independent development of neighboring countries [5].

This innovative concept of international relations has far-reaching and positive impacts globally. While promoting cross-border interconnectivity, China actively leads the transformation of international relations, contributing Chinese wisdom to the construction of a more just, equal, and inclusive international order. This also points to a positive direction for the future development of international relations, encouraging countries to achieve mutual prosperity through collaboration and promoting sustainable development of global society. Figure 2 illustrates the innovative evolution of China's relationships with neighboring countries.

### 2.3 The Constructive Logic of the New Type of International Relations between China and Its Neighbors through Cross-Border Interconnectivity Practice

Compared to traditional realist international relations, the initiative of cross-border interconnectivity advocates for establishing equal international relations, symbolizing the reshaping of China's relations with neighboring countries. In terms of content, the initiative of cross-border interconnectivity redefines the essence of China's relations with neighboring countries, emphasizing "common development." In contrast to the realism concept that traditionally focuses on interstate competition and power games, the cross-border interconnectivity initiative emphasizes the idea of mutual cooperation and shared prosperity [6]. This initiative is not only an economic cooperation plan but also a profound reflection on the model of international relations. In the construction of equal international relations, the cross-border interconnectivity initiative advocates respecting the independence and autonomy of each country. It promotes mutual benefit and win-win outcomes among nations through a cooperative common development framework. From a strategic perspective,
the initiative provides broader development opportunities for China's neighboring countries, encouraging practical cooperation based on mutual respect. This is a form of economic cooperation and injects new vitality into international relations, fostering shared prosperity and stability goals. Through this initiative, China showcases its economic strength on the international stage and expresses its determination to build equal international relations [7]. Figure 3 illustrates the constructive logic of the new type of international relations between China and its neighbors.

![Figure 3: The constructive logic of the new type of international relations between China and its neighbors](image_url)

Firstly, from a horizontal perspective, the "Belt and Road" initiative has reshaped China's relations with neighboring countries. Next, in the vertical dimension, the "Belt and Road" development-centered practice has constructed a multilevel cooperation pattern between China and neighboring countries. This pattern encompasses cooperation at the national, sub-national, and regional levels, establishing a "network" for common development between China and its neighbors, leading innovatively to a new model in the development of relations with neighboring countries. Ultimately, at the regional level, the "Belt and Road" initiative exhibits the characteristics of regional public goods. It has innovatively supplied regional public goods for neighboring countries, driving the construction of a new type of international relations and a community with a shared future for the region.

3. **Cross-Border Interconnectivity and the Multilevel Construction of New International Relations in the Surrounding Region**

3.1 **Strategic Alignment and Mutually Beneficial Cooperation at the National Level**

In the multilevel relationships between China and neighboring countries, interactions at the national level are considered foundational. Within the framework of cross-border interconnectivity, exchanges, communication, and interactions at the national level provide prerequisites for multilevel cooperation and development at the national, sub-national, and regional levels. The interactions at the national level are regarded as the cornerstone of the entire system in the multilayered relationships between China and its neighboring countries. Under the framework of promoting cross-border interconnectivity, communication, exchanges, and interactions among nations become the foundation and prerequisite for multilevel cooperation and development at the national, sub-national, and regional levels [8]. The interactions between nations play a crucial role in driving multilevel cooperation and development. In the context of cross-border interconnectivity, communication, exchanges, and interactions at the national level become the foundation for building deep-level cooperation among nations, sub-national entities, and regions. This national-level interaction not only influences the economic aspects but also plays a positive role in politics, culture, technology, and various other fields. As the interactions at the national level deepen, the cooperation between China and neighboring countries exhibits a more diverse and extensive development trend. This trend promotes multilevel regional cooperation and development and provides robust support for building more closely coordinated international relations globally. The interaction at the national level...
becomes the engine driving the entire international system toward more open and mutually beneficial development [9].

3.2 Cross-Border Interconnectivity Construction at the Sub-National Level

The construction of cross-border interconnectivity at the sub-national level is crucial in the multilevel construction of new international relations in the surrounding region. Cooperation among countries at the sub-national level includes the construction of cross-border infrastructure and in-depth collaboration in areas such as trade, investment, and technology. Strengthening cross-border interconnectivity at the sub-national level can better promote the common prosperity of countries within the region and achieve mutual benefits [10]. Figure 4 illustrates the framework for the construction of cross-border interconnectivity at the sub-national level.

![Cross-border interconnectivity construction at the sub-national level](image)

Figure 4 The construction of cross-border interconnectivity at the sub-national level

3.3 New Trends in Regional Cooperation

Cross-border interconnectivity has propelled new trends in regional cooperation, infusing vitality into the construction of new international relations in the surrounding region. Countries enhance the region's political dialogues, cultural exchanges, and security cooperation, fostering a tighter collaboration network. Through the new trends in regional cooperation, neighboring countries can better address global challenges, forming a more solid foundation for unity and cooperation [11,12].

4. Challenges and Reflections in the Construction of New International Relations

4.1 Issues in the Construction of New International Relations

Figure 5 illustrates the framework for analyzing the issues in the construction of new international relations.
In the practice of cross-border interconnectivity, there are objectively a series of issues in the construction of relations between China and its neighboring countries, and these issues cannot be ignored. In the horizontal dimension, the restraining factors of major powers are a significant problem. Some neighboring countries may feel geopolitical pressure from China and, therefore, maintain caution in cooperation. There are cross-border security risks in the vertical dimension, as instability in some regions may adversely affect the entire practice of cross-border interconnectivity. Simultaneously, the uneven governance capacity of neighboring countries is also a problem, as some countries may struggle when faced with the complexity of transnational cooperation. In the regional dimension, the construction of a community of shared destiny for the region requires balancing the interests of various countries, which is also a rather complex problem.

4.2 Reflections on Issues in the Construction of Relations with Neighboring Countries through Cross-Border Interconnectivity

A thorough analysis, reflection, and deepened understanding are required to address these issues. In order to address the restraining factors of major powers, efforts should be made through strengthened diplomatic initiatives to promote more open and transparent cooperation, enhancing trust among neighboring countries towards China. Regarding cross-border security risks, it is possible to mitigate these risks through strengthening security cooperation mechanisms, enhancing intelligence sharing, and collectively maintaining regional stability. Strengthening the governance capacity of neighboring countries requires training and technical support to help them better cope with challenges in cooperation. Improving the quality of regional public goods necessitates the establishment of more effective mechanisms to ensure that countries can fairly share resources and opportunities in cooperation.

4.3 Recommendations for the Construction of China's New International Relations with Neighboring Countries through Cross-Border Interconnectivity

In order to better construct new international relations between China and its neighboring countries, the following recommendations are proposed: First, strengthen political dialogues between nations to alleviate the constraints imposed by major powers by establishing more just and transparent cooperative mechanisms. Second, enhance regional security cooperation to collectively address cross-border security risks and ensure the smooth progress of cross-border interconnectivity practices. Third, assist neighboring countries in improving governance capabilities through international cooperation, enabling them to better adapt to the collaborative requirements of cross-border interconnectivity. Lastly, collectively strive to improve the quality of regional public goods, promoting the construction of a community of shared future for the region and achieving common prosperity and development.

These recommendations aim to comprehensively address the challenges in cross-border interconnectivity practices, providing a more comprehensive and feasible path for the construction of China's relations with neighboring countries. This can propel the development of new international relations towards a stabler and more dynamic direction.

5. Conclusion and Prospects

In the current global landscape, guided by the central leadership's focus on two major themes and two overarching goals, China actively seeks to construct a new type of international relations, with particular emphasis on developing relationships with neighboring countries. The goal is to foster positive interactions between China and the world. This work aims to explore in depth the impact of cross-border interconnectivity on the construction and practice of new international relations. Through comprehensive empirical analysis and theoretical research, the following conclusions are drawn:
First, cross-border interconnectivity, as a vital component of globalization, has accelerated the connections and interdependence between nations. This interconnection is evident not only in the economic sphere but also in politics, culture, and various other dimensions. The diminished sense of distance between nations makes cooperation a crucial element in addressing global challenges collectively. Moreover, cross-border interconnectivity has played a positive role in advancing economic globalization. The construction of interconnected infrastructure and communication networks facilitates trade and investment among different countries. This, in turn, promotes the formation and development of global value chains, providing more development opportunities for nations. Furthermore, the construction of new international relations, driven by cross-border interconnectivity, is becoming more diverse and inclusive. Traditional models of international relations are evolving into more open, equal, and mutually beneficial relationships. Countries strengthen mutual trust through their participation in interconnected projects, forming closer partnerships. In future research and practice, there is room for a deeper understanding of cross-border interconnectivity. It is essential to focus on the impact of digitization and technological innovation on cross-border interconnectivity. As digital technology rapidly advances, digital cooperation is poised to become a new engine driving the development of international relations.
