Abstract: With the continuous development of physical education in colleges and universities, the reform of teaching methods has become one of the important ways to improve students' comprehensive literacy. This study aims to deeply explore the application of inquiry-based teaching method in college tennis teaching, and provide innovative teaching ideas for college tennis teaching through theoretical analysis and countermeasure suggestions. Firstly, the thesis reviews the limitations of traditional teaching method in tennis teaching, and introduces the basic concept of inquiry-based teaching method and its successful application in other disciplines. Secondly, through literature review and theoretical analysis, the potential advantages of inquiry-based teaching method in cultivating students' independent learning ability, teamwork spirit and problem-solving ability are explored. Finally, specific countermeasures for implementing inquiry-based pedagogy in college tennis teaching are proposed, including suggestions for instructional design, teacher training, and assessment mechanisms. Through this study, we expect to provide useful references for the reform and innovation of college tennis teaching.

Keywords: Inquiry-based Teaching Method; College Tennis Teaching; Independent Learning Ability; Teamwork; Problem Solving Ability.

1. Introduction

A. Background
In contemporary college physical education, the innovation of teaching methods has become an urgent need to improve students' comprehensive literacy. As an important part of college students' physical and mental health, the reform of teaching methods is of great significance to students' comprehensive development. Tennis as a challenging sport, the traditional teaching mode is difficult to meet the diversified learning needs of students. Therefore, inquiry teaching method as a new teaching method focusing on students' active participation and problem solving ability cultivation has emerged in college tennis teaching.

B. Purpose and significance of the study
The purpose of this study is to deeply investigate the application of inquiry-based teaching method in college tennis teaching and to explore its potential impact on students' independent learning, teamwork and problem solving abilities through theoretical discussions and countermeasure suggestions. Through this study, we hope to provide new teaching ideas for college tennis teaching, promote students' overall development, and cultivate their leadership in teamwork and problem solving.

C. Literature review
In order to better understand the application of inquiry-based pedagogy in physical education teaching in colleges and universities, this paper provides an extensive review of the literature in related fields. From a variety of perspectives, including educational psychology and physical education theory, we have sorted out the basic concepts, characteristics, and successful experiences of inquiry-based teaching method in other disciplines. Through the literature review, we are not only able to better grasp the theoretical framework of inquiry-based pedagogy, but also able to more deeply explore its application prospects in college tennis teaching. By analyzing the relevant literature, we will be able to better position this study in the academic field, as well as provide strong theoretical support for subsequent research.

2. Theoretical Foundations of Inquiry-Based Pedagogy

A. Concepts and characteristics of inquiry-based pedagogy
Inquiry teaching method is a kind of student-centered teaching mode, whose core idea is to prompt students to deeply understand knowledge and develop problem-solving ability through their active participation and independent inquiry. The introduction of inquiry-based teaching method in tennis teaching is not only to teach techniques and tactics, but also to cultivate students' independent understanding of tennis and thinking ability. The inquiry teaching method emphasizes that students accumulate experience in the process of problem solving, and gradually form a comprehensive understanding of tennis through practical operation and reflection.

In addition, the inquiry-based teaching method focuses on stimulating students' interest and motivation in learning, and guides students to take the initiative to explore through the design of specific problem situations, so that they can experience the joy of learning in practice. Teachers play the role of guides in this process, prompting students to form the habit of independent thinking. Therefore, the characteristics of inquiry-based teaching method include problem orientation, student participation, strong practicality, etc. These characteristics provide theoretical support for its application in college tennis teaching.

B. Experiences in the application of inquiry-based teaching methods in other disciplines
Inquiry-based pedagogy has achieved remarkable success in several disciplines. Taking the natural and social sciences as an example, many scholars and educational practitioners have adopted the inquiry-based teaching method in their teaching and achieved positive results. By summarizing these
experiences, we can find that inquiry-based pedagogy helps to stimulate students' interest in the discipline, improve their problem-solving skills, and develop their teamwork spirit. These experiences provide a reference for the introduction of inquiry-based teaching method into tennis teaching in colleges and universities, and at the same time, they also inspire us that we should take the characteristics of the discipline into full consideration and flexibly use inquiry-based teaching method to better adapt to the needs of physical education. [6]Through the experience of application in different disciplines, we can better understand the versatility and flexibility of inquiry-based teaching method and provide theoretical basis for its practical use in college tennis teaching.

3. Limitations of Traditional Tennis Teaching

A. Characteristics of traditional teaching methods
Traditional tennis teaching is usually teacher-centered, focusing on technology transfer and rule explanation. In this model, the teacher is often the knowledge leader, and students play the role of passive receivers. The traditional teaching method focuses on standardized movements and technical details, emphasizing students' imitation of the teacher. The teaching content often centers on the basic techniques, tactics and rules of the game of tennis, and lacks attention to the students' subjective initiative.

B. Problems with traditional tennis instruction
1. Students' lack of initiative and creativity: Traditional tennis teaching emphasizes the teacher's guidance to students, resulting in students' lack of initiative and creativity. They rely more on the teacher's guidance and lack active thinking and independent inquiry about tennis.

2. Difficulty for students to develop a comprehensive understanding: The traditional teaching method focuses on the decomposition of techniques and rules, which makes it difficult for students to develop a comprehensive understanding of the game of tennis. They tend to focus one-sidedly on technical movements and neglect tactical applications and overall strategies.

3. Lack of teamwork and communication skills: Traditional tennis teaching tends to focus on individual skills, ignoring the importance of teamwork and communication. It is difficult for students to develop teamwork experience in teaching, which may become a constraint in actual matches.

Through in-depth analysis of the characteristics and problems of traditional tennis teaching, we are able to recognize more clearly its shortcomings in meeting the needs of students' comprehensive development, which provides the necessary background and basis for the subsequent proposal and application of inquiry-based teaching method.

4. Application of Inquiry-Based Teaching Method in College Tennis Teaching

A. Examples of practice in teaching tennis
In the practice of introducing inquiry-based teaching method into college tennis teaching, we can draw on some successful cases. Through specific practice cases, we can deeply understand the application of inquiry-based teaching method in tennis teaching and the effect achieved.

For example, a teaching mode based on problem situations can be designed to guide students to face various tactical and technical problems in simulated matches and solve these problems through group cooperation. In this way, students can not only understand single technical movements, but also apply them to actual game situations and develop the ability to apply skills in a comprehensive way. The case study can help us understand more specifically the operation method of inquiry-based teaching method in college tennis teaching and provide feasible guidance for implementation.

B. Potential impact of inquiry-based pedagogy on student development
During the implementation of inquiry-based pedagogy, we expect to observe a range of positive changes in student development. As inquiry-based pedagogy focuses on the development of independent learning, teamwork, and problem-solving skills, we focus on the following areas of potential impact:

1. Self-directed learning skills: It is expected that the students' willingness and ability to take the initiative in learning the game of tennis will be enhanced through their self-directed investigations in real-world problems.

2. Teamwork: Through the practice of cooperative group problem solving, students are expected to develop teamwork skills to support future competitions and group activities.

3. Problem-solving skills: By facing different tactical and technical problems, students develop problem-solving thinking, which enables them to be more flexible in responding to various situations during a match.

By observing and analyzing these potential impacts, we can more comprehensively assess the actual effects of inquiry-based pedagogy in college tennis teaching and provide empirical references for further promotion and improvement.

5. Recommendations for Responses

A. Instructional design
In order to effectively introduce inquiry-based teaching method, the teaching content and context need to be carefully designed. Firstly, teachers can provide real competition scenarios through contextualized case design, guiding students to investigate and solve problems in them. Secondly, focus on designing open-ended questions to stimulate students' interest in thinking and exploring. Through skillful problem setting, students can be guided to deeply understand the tactics and techniques of tennis and develop the ability of comprehensive application in practice. Teaching design should focus on flexibility and be differentiated according to the different levels and interests of students to meet the learning needs of individual students.

B. Teacher training
The introduction of inquiry-based pedagogy requires teachers with relevant educational concepts and operational skills. Teacher training should include the following:

1. Theoretical training: To provide theoretical knowledge of the inquiry-based pedagogy so that teachers fully understand the educational philosophy behind it and the principles of its implementation.

2. Case Sharing: Sharing of successful practice cases to enable teachers to understand the experience of applying inquiry-based pedagogy in other subjects or sports.

3. Operational skills training: Provide specific operational skills training, including capacity building in problem design, student guidance and classroom management.

4. Reflection and exchange: Teachers' symposiums are organized on a regular basis to encourage teachers to reflect on and exchange teaching practices and to continuously
optimize teaching design and operational strategies.

C. Assessment mechanisms

In order to effectively assess the effect of inquiry-based teaching method in college tennis teaching, a scientific and reasonable assessment mechanism needs to be established. The assessment can be carried out in the following aspects:

1. Student Academic Performance: Observe students’ academic performance in an inquiry-based instructional environment, including the enhancement of problem-solving skills, teamwork, and self-directed learning.

2. Student Feedback: To collect students’ feedback on the inquiry-based approach and to find out how well they have accepted the new teaching model and how they feel the changes have been made.

3. Comparison of Teaching Effectiveness: A comparative study of inquiry-based teaching methods and traditional teaching methods to analyze the similarities and differences between the two in terms of academic performance, student participation, and so on.

4. Teachers’ teaching level: To assess teachers' teaching level in an inquiry-based teaching environment, including problem design, guiding ability and classroom management.

Through the establishment of a comprehensive assessment mechanism, a more objective understanding of the actual effect of inquiry-based teaching method in college tennis teaching can be achieved, providing a scientific basis for further teaching improvement.

6. Implementation and Impact Assessment

A. Steps in implementing an inquiry-based approach to teaching and learning

In order to successfully implement an inquiry-based approach to teaching tennis in colleges and universities, the following steps can be followed:

1. Needs analysis: Prior to teaching, the teaching objectives and design directions are clarified by understanding students' levels, interests and learning needs.

2. Problem design: Design open-ended questions at the students' level on tennis techniques, tactics and match strategies to stimulate students’ thinking and desire to investigate.

3. Contextualization: Creating realistic competition situations that allow students to cope with problems in real-life operations and motivate them to solve problems in teamwork.

4. Student guidance: To guide students to work in teams and develop their teamwork and communication skills through discussion and cooperative problem solving.

5. Feedback and Summarization: Provide timely feedback to students during the process of inquiry, encourage them to reflect and summarize, and promote in-depth understanding of knowledge.

6. Curriculum Adjustment: Flexible adjustment of teaching strategies based on student feedback and actual teaching situation to ensure the smooth running of the teaching process.

B. Indicators and methodologies for effectiveness evaluation

In order to comprehensively assess the effectiveness of inquiry-based pedagogy in teaching tennis in colleges and universities, the following indicators and methods can be used:

1. Academic performance indicators:
   - Students' ability to solve open-ended problems.
   - Student performance in teamwork.

2. Student feedback indicators:
   - The extent and effectiveness of student self-directed learning.
   - Student satisfaction with inquiry-based pedagogy.
   - Student feedback on course design and contextualization.

3. Comparative research methods:
   - Changes in students’ feelings and perceptions of personal development.

4. Assessment of teachers' teaching standards:
   - Teachers’ ability to design and guide questions in an inquiry-based instructional setting.
   - Teacher performance in student feedback and teamwork.

5. Assessment of teachers' teaching standards:
   - Through the comprehensive use of the above indicators and methods, the actual effect of inquiry-based teaching method in college tennis teaching can be assessed comprehensively and objectively, providing a scientific basis for teaching improvement.

7. Discussion and Outlook

A. Discussion of the findings

After implementing the inquiry-based approach and evaluating its effectiveness, an in-depth discussion of the findings is needed to reveal the actual impact and potential problems of the inquiry-based approach to teaching tennis in colleges and universities. Discussion highlights include:

1. Improvements in student performance: To analyze the improvements in student performance in problem solving, teamwork and independent learning and to explore the reasons and mechanisms behind these improvements.

2. Effectiveness of instructional design: To assess the effectiveness of instructional design by discussing the impact of different problem situations and contextual settings on student learning and which designs are more conducive to enhancing students’ general literacy.

3. Student Feedback and Acceptance: To explore student feedback on inquiry-based teaching methods and to analyze students' acceptance of this teaching model and their attitudes towards the course.

4. Comparison with traditional pedagogies: Compare and contrast inquiry-based pedagogies with traditional pedagogies, discussing the similarities and differences between the two in terms of academic performance, disciplinary interests, etc., so as to provide a more comprehensive option for teaching tennis in colleges and universities.

B. Shortcomings and directions for future research

The discussion should be accompanied by an honest look at the shortcomings of the study and directions for future research:

1. Sample limitations: If the sample in the study is from a specific school or district, this should be clearly stated, along with a suggestion that the sample could be expanded in the future to increase the generalizability of the study.

2. Time constraints: Long-term effects may not be observed if the study is limited in time, so suggestions can be made that future studies should consider longer time scales to get a fuller picture of the lasting effects of inquiry-based pedagogy.

3. Teacher training issues: If teachers are not adequately trained in inquiry-based pedagogy, this may affect the
effectiveness of teaching and learning, and future research could further deepen the study of teacher training.

4. Consideration of additional factors: The study may not have taken into account other influencing factors, such as individual student differences and subject characteristics, which could be considered in depth in future studies.

By carefully discussing the shortcomings and proposing directions for future research, the study can be made more complete and instructive, providing stronger support for further promoting the innovation of tennis teaching mode in colleges and universities.

8. Conclusion

A. Key findings
The study obtained a series of key findings by evaluating the implementation and effectiveness of inquiry-based pedagogy in college tennis instruction:

1. Improved student performance: The implementation of an inquiry-based approach to teaching tennis in colleges and universities has resulted in significant improvements in student performance in problem solving, teamwork and independent learning. They demonstrated higher interest in the subject and stronger general literacy.

2. Effectiveness of instructional design: The flexibility of instructional design and contextualization have a tremendous impact on student learning. Well-designed problems and contexts can better guide students to think deeply and practically, thus improving their academic performance.

3. Positive feedback from students: Most students had a positive attitude towards the inquiry-based teaching method, believing that this mode of teaching better met their learning needs. Students better utilized their individual strengths in teamwork and developed a positive learning atmosphere.

4. Comparison with traditional teaching methods: Comparative studies have shown that, compared with traditional teaching methods, inquiry-based teaching methods have obvious advantages in cultivating students' independent learning ability, teamwork and problem-solving ability.

B. Implications for the teaching of tennis in colleges and universities

The combined research found that the implications for tennis teaching in colleges and universities are mainly in the following areas:

1. Focus on students' subjectivity: The teaching process should pay more attention to stimulating students' subjectivity and enthusiasm, guiding students' active participation through the inquiry-based teaching method, and enhancing their interest in the subject and their ability to learn on their own.

2. Flexible use of instructional design: Teachers should flexibly apply the principles of the inquiry-based teaching method when designing the content of instruction, and create a variety of problematic situations to meet the learning needs of different students.

3. Enhance teacher training: Provide teachers with more systematic training in inquiry-based pedagogy to improve their professionalism in problem design, contextualization and teamwork facilitation.

4. Continuous assessment and adjustment: After the implementation of the inquiry-based teaching method, continuous assessment should be carried out to adjust the teaching strategies in a timely manner according to the feedback from students and teachers and to optimize the teaching process continuously.

By explicitly summarizing the findings, specific recommendations for improving tennis instruction in colleges and universities can be provided, as well as useful lessons and insights for similar studies in the future.
