

Research on the Cultivation of Graduate Ideological and Political Education under the Influence of Microcultures

Shuang Liu, Li Yang

Anhui University of Finance and Economics, Bengbu Anhui, 233000, China

Abstract: In the current epoch, propelled by the Internet's accelerated proliferation, society has entered what can felicitously be termed the micro-epoch. Within this burgeoning micro-epoch, a discernible cultural evolution known as micro-culture is progressively materializing. Arising from the pervasive use of online platforms such as Weibo and WeChat, micro-culture underscores minute and individualistic growth. China presently hosts a multitude of "micro" bloggers, an escalating inclination for "micro" transactions, and enterprises including "micro" philanthropy, which dispenses minuscule acts of warmth. Though their influence appears diminutive, these developments are subtly permeating diverse societal sectors. While subtle, micro-culture is essentially revolutionizing people's day-to-day lives. It is essential that educational institutions capitalize on this momentum, reconceptualizing obstacles as opportunities, and proactively forging novel pathways in graduate student ideological and political instruction.

Keywords: Ideological and Political Education; Graduate Students; Micro Culture.

1. Introduction

Amidst the sway of microcultural forces, we've delved into the existing landscape of ideological and political learning for postgraduates. We've examined how extensively microcultures sway the educational sphere. It's evident that certain institutions cling to the antiquated method of "unidirectional" teaching, which impedes prompt information dissemination, lessens the prominence of ideological and political guidance, and does not facilitate genuine reciprocal communication. We've probed into the aims behind microcultures, and a random inquiry at one university showed that the chief intent behind creating a microcultural forum is to keep up with friends' activities, with only a small faction looking to boost the ideological and political training for graduate students. Within this reality, universities must devise targeted strategies that are both effective and practical to tackle the quandary of engaging students meaningfully with microcultural pedagogy, as this poses the sole viable solution. Thus, it is incumbent upon academic institutions to amplify the application of microcultures within ideological and political instruction to elevate the standard of education delivered and attain the educational objectives sought.

2. The influence of microcultures

1.1. The Positive Impact of Microcultures on Graduate Education

Microcultural platforms foster open and egalitarian dialogues. Unlike conventional top-down indoctrination, microcultures introduce fresh approaches and concepts for ideological and political instruction. Within the realm of microcultures, the dynamic between educators and pupils shifts from a strict hierarchy to a balanced reciprocity. This egalitarian and interactive setting encourages postgraduates to express themselves more freely, while educators are better equipped to genuinely engage with and comprehend student perspectives. Microcultures facilitate a rapid diffusion effect, similar to splitting atoms. Today's postgraduate students are

brimming with curiosity and eagerness to explore novelties. They revel in exchanging their viewpoints and discoveries on microcultural forums and contribute actively to discourse. The fast-paced dissemination on these platforms has captured the interest and participation of postgraduates, offering an expansive arena for communication and opportunities for those in ideological and political education. University ideological and political instructors should adeptly harness microcultural mediums, promptly grasp the needs and trends of postgraduates, and adapt various strategies to conduct ideological sessions, thereby amplifying the potency and reach of their educational endeavors.

Microculture's role in the ideological and political shaping of postgraduate students is undeniable. In the current era, microculture has emerged as an essential cultural presence, exerting a growing influence on postgraduates. Initially, the egalitarian communication paradigm championed by microcultures offers these students a broader and more liberated interactive arena, fostering more balanced and congenial teacher-student dynamics. Furthermore, the swift dissemination of microculture through viral means enables graduates to effortlessly encounter diverse novel knowledge and data, igniting their zeal and drive for academic pursuit. Hence, higher education must actively harness the strength of microculture, revolutionizing the approaches to ideological and political training, and more effectively guiding the evolution and maturation of postgraduate students.

1.2. The Negative Impact of Microcultures on Graduate Education

Navigating the complex landscape of information quality is an arduous task indeed, fraught with peril. In the contemporary milieu where micro-culture platforms proliferate, refining the graduate student network monitoring system has emerged as a veritable conundrum for ideological and political educators. Graduate students, impressionable and susceptible, find themselves increasingly vulnerable to the siren song of misinformation, which invariably

compounds the challenge of steering them towards the beacon of accurate concepts. This treacherous tide also erodes the potential for anticipating and directing their intellectual meanderings.

At the same time, age-old educational techniques, which were once the academic cornerstone, now wrestle with the monumental upheavals brought by these digital territories. In the respected corridors of higher learning, where conventional didactic methods dominate, the subversive influence of micro-culture challenges entrenched educational models. The pervasive impact of internet culture dilutes the unique core of traditional ideological and political tutelage within the boundaries of scholarly institutions.

The ever-expanding toolkit of electronic media saps the vitality from antiquated teaching strategies, while the unidirectional approach of yesteryear's instruction sparks resistance among the youthful scholars, who, bereft of self-discipline, succumb to the allure of virtual micro-cultures.

In light of these multilayered quandaries, it becomes incumbent upon ideological and political educators to engage in a continual process of pedagogical evolution. By bolstering network surveillance and guidance with vigilance and innovation, they can ensure that the budding minds entrusted to their care absorb the wellspring of correct information and cherished values. Through this relentless endeavor, the efficacy and resilience of ideological education will be fortified, safeguarding the future with wisdom and integrity. As the adage goes, "the pen is mightier than the sword," and in the battle for minds, the right guidance is our most potent weapon.

2. The Current Situation of Graduate Ideological and Political Education from the Perspective of Microcultures

2.1. The Scope of Influence of Microcultures

Currently, a number of institutions of higher learning persist in using the conventional pedagogy, where instructors teach students directly. Even though this method has seen widespread use historically, its deficiencies are becoming increasingly evident with shifts in the micro environment. The dispensation of knowledge through this medium is often constrained by temporal and geographical boundaries, hindering prompt content updates and significantly undermining the efficacy of educational efforts in ideological and political realms. Furthermore, this antiquated educational framework perpetuates an imbalance in information dissemination, limiting opportunities for student participation and articulation within the educational exchange, thereby impacting the thoroughness and profundity of ideological and political instruction. Hence, there exists a pressing imperative to revamp our educational practices, embracing more engaging and varied didactic strategies to align with the requisites of contemporary societal progress. Revitalizing the educational approach can significantly enhance students' enthusiasm and inventiveness in their studies, fostering their holistic capabilities alongside analytical reasoning. In alignment with contemporary societal progress, it is essential to revamp educational practices, and both educators and pupils must recognize the limitations of conventional unidirectional teaching methods. Embracing more interactive and varied instructional strategies is crucial. Such a transition

will enable better alignment with the evolving societal demands, further igniting students' passion and ingenuity, thus refining the relevance and potency of ideological and political education.

2.2. The Goals of Cultivation in the Era of Microculture

The goals of cultivation in the era of micro-culture have shifted from merely academic achievement to encompassing a well-rounded development. Emphasis is placed on character building, emotional intelligence, and social skills alongside traditional educational pursuits. A nurturing environment is created where individuals can explore their passions and interests, fostering creativity and innovation. The aim is to prepare individuals for the complexities of modern life, enabling them to become adaptable, responsible, and compassionate members of society.

The seismic shift in educational focus has catalyzed a profound reevaluation of pedagogical strategies. Transcending the archaic tenets of rote memorization, there now exists an electrifying emphasis on immersive, experiential learning—an approach that beckons students to delve into the dynamic world that surrounds them, fervently inquiring, questioning, and unearthing answers with an unquenchable thirst for knowledge. This transformative method breathes life into the development of critical thinking and problem-solving acumen, equipping young minds with the indispensable tools necessary for navigating the tumultuous landscape of our ever-evolving global society. Furthermore, it galvanizes students to embrace the mantle of responsibility for their own academic journeys, nurturing autonomous, self-guided learners who carry an inextinguishable passion for the pursuit of wisdom throughout the boundless expanse of their lives.

This immersive approach also encourages interdisciplinary thinking, as students are no longer confined to the rigid boundaries of isolated subjects. Instead, they learn how various disciplines intersect and influence each other, fostering a comprehensive understanding of complex issues. The significance of this shift in educational philosophy cannot be overstated, as it not only prepares students for success in their academic endeavors but also empowers them to become well-rounded citizens equipped to tackle the multifaceted challenges that await them in the future. In conclusion, the seismic shift towards immersive, experiential learning represents a monumental leap forward in education. It cultivates critical thinking, problem-solving skills, and autonomous learning, all while breaking down disciplinary barriers. As we continue to evolve in our rapidly changing world, it is essential that our education systems keep pace, preparing students not just for exams, but for lifelong success and global citizenship.

3. Exploring New Paths for the Ideological and Political Education of Graduate Students

3.1. Application of Digital Teaching Platform

Utilizing the internet and modern digital techniques, we are developing a cutting-edge virtual learning environment aimed at furnishing postgraduate learners with pervasive

educational resources as well as channels for interactive discourse. This innovative platform will serve not merely as a static depository of knowledge but will embody an engrossing educational community committed to nurturing self-driven and synergistic learning prowess amongst the students. It will amass an expansive compilation of scholarly materials, encompassing texts, class handouts, video tutorials, research articles, and more, spanning multiple domains to satiate the varied academic appetites of individual pupils. Leveraging smart search and suggestion protocols, patrons shall effortlessly stumble upon content that aligns with their educational inclinations and proficiency tiers. The system will facilitate diverse interactive exchange features, such as web-based dialogues, collective endeavors, and assignment tasks.

Through online forums, students can converse and debate in real-time with instructors and peers, exchange educational insights, pose inquiries, clear up uncertainties, and foster the development of academic networks and knowledge dissemination. This will also facilitate tailored and self-driven educational approaches. Learners are empowered to select their learning materials and trajectories, fashioning unique educational agendas that suit their individual pacing and preferences. Moreover, an integrated system for learning analytics and feedback is designed to assist learners in tracking educational advancement, adapting study tactics promptly, and augmenting educational efficacy. The endeavor to establish an online educational platform via internet and digital tools constitutes a crucial undertaking for graduate-level ideological and political instruction, endowing scholars with a more handy, versatile, and dynamic learning environment, thereby nurturing their overall growth and cultivating lifelong learning propensities.

3.2. Cultural and Creative Integration

Merging elements of traditional and modern culture within the framework of ideological and political education content design represents an innovative method. By utilizing a variety of mediums, such as literature, film, and music, to convey themes of humanistic concern and social values to grad students, it not only resonates on an emotional level but also expands their intellectual perspectives. Selecting time-honored literary works can be used to lead graduate students in contemplating life's meaning, moral values, and related topics through reading and interpretation. Introducing contemporary literary works displays the journeys of societal transformation and personal development, sparking students' interest in and contemplation of current societal concerns. Film and television works serve as vivid tools for ideological and political education. By choosing films and TV shows with profound ideological content, engaging in post-viewing discussions, and analyzing plotlines, graduate students can be guided into discourse about power and responsibility, justice and fairness, thereby fostering their sense of societal duty and civic awareness.

Music, a universal language that transcends borders, can also be utilized for conveying profound ideological messages. By selecting compositions that carry significant historical or cultural meaning, graduate students can be encouraged to reflect on the interconnectedness of different cultures and histories. Furthermore, integrating musical performances and analysis in the curriculum allows for a deeper understanding of the emotional and aesthetic dimensions of political thought. Incorporating real-life cases and scenarios into the educational process enhances the practical relevance of the

content. Engaging graduate students in discussions about current events, historical case studies, and ethical dilemmas helps them apply theoretical knowledge to concrete situations. This approach not only stimulates critical thinking but also prepares them for navigating the complexities of their future roles in society. In summary, the fusion of traditional and modern elements in ideological and political education content design for graduate students should aim to create a well-rounded educational experience. Through literature, film, music, and real-life applications, students can develop a nuanced understanding of societal values and responsibilities, ultimately shaping their role as informed and engaged citizens.

3.3. Cross Cultural Exchange Experience

By utilizing online platforms or offline communication activities, actively organizing graduate students to participate in international exchanges and cross-cultural experiences, in order to expand their international perspectives and cross-cultural communication abilities, and cultivate talents that meet the needs of globalization. Through online platforms, a virtual platform for international academic exchange can be established to promote academic exchange and collaborative research between graduate students and their foreign counterparts. At the same time, organize offline international cultural exchange activities, such as international academic conferences, cultural festivals, study abroad exchange projects, etc., so that graduate students can participate personally and experience the academic atmosphere and lifestyle in different cultural backgrounds. Through these exchanges and experiences, graduate students can gain a deeper understanding of the diversity and complexity of the international community, enhance their cross-cultural communication abilities, and cultivate comprehensive literacy and international competitiveness in the context of globalization. In this process, graduate students will be able to broaden their horizons, increase opportunities for communication with people from different cultural backgrounds, and thus enhance their comprehensive literacy and international competitiveness. Through this series of international exchange activities and cross-cultural experiences, graduate students will not only gain new inspiration and knowledge in academia, but also exercise their abilities in cross-cultural communication and international cooperation, fully preparing for the future globalized workplace. This comprehensive improvement in comprehensive literacy and international competitiveness will enable graduate students to stand out on the international stage and become outstanding talents with a global perspective and international background.

Through the vibrant medium of micro cultural dissemination platforms, we are committed to broadly championing the noble inheritance activities of contemporary graduate students pertaining to the socialist core value system. This approach is anchored by the bedrock principles of socialist values, which serve as a beacon in sculpting "micro" campuses and "micro" cultures that resonate with virtue. In doing so, we fortify our students' sense of responsibility and moral framework, empowering them to steadfastly uphold correct values and fervently strive towards crafting a harmonious and refined campus culture. In this digital epoch, it is incumbent upon us to harness modern technological prowess, proactively expanding the venerable channels through which socialist core values resonate. We are dedicated to guiding our graduate students to delve deeply

into the study and rich inheritance of these foundational values, thereby fueling the advancement of campus culture and nurturing an abundance of eminent talents endowed with a profound sense of duty and a compelling mission.

We must wholeheartedly acknowledge the paramount significance of the socialist core values system in fostering students' accurate perspectives on life, valuations, and the expanse of the world. The true establishment of righteous life goals and value orientations can only be achieved when students intimately grasp the essence and import of these pivotal values. Hence, we ought to assiduously steer our pupils toward embracing and internalizing the socialist core values via multifarious avenues, seamlessly integrating these ethos into the fabric of their everyday existence and scholarly pursuits.

4. Conclusion

Within the sphere of microcultural impacts, as we nurture the realm of ideological and political teachings for our postgraduates, it is crucial to heed their perception and stance towards such microcultures, steering them towards a proper comprehension and utilization of these cultural facets. It becomes imperative to bolster the information savvy and analytical thought processes of the graduate students, aiding them in discerning the veracity of data, warding off the perils of misinformation, encouraging active engagement in the propagation and dialogue within microcultures, and fostering a robust sense of societal duty and public consciousness.

Undoubtedly, the epoch of microcultures exhibits its profound duality. These microcultures endow aspiring scholars with unfettered access to an abundance of information and a plethora of diverse interaction mediums, thus exponentially broadening their horizons and intellectual frameworks, catalyzing both personal metamorphosis and scholarly transcendence. Simultaneously, however, the deluge of data and insidious misinformation within these intricate cultures may subtly yet perniciously distort the nascent values and discernment of graduate students. Ensuring that they acquire and scrutinize information with meticulous discernment is paramount. Therefore, in the esteemed domain of higher education's ideological and political teachings, it is crucial to fully utilize the immense

potentials of microcultures. It also involves skillfully directing graduate students to master the craft of recognizing and sidestepping pernicious obstacles, simultaneously encouraging positive interaction and communal development for the welfare of everyone involved. This is because, as the insightful proverb declares, "Knowledge is power", yet it is only through wise discernment that we can truly utilize this power to enhance our scholarly pursuits and intellectual endeavors.

Acknowledgments
